

# What <sup>are</sup> you doing with your lighting waste?

A single fluorescent light tube is positioned diagonally across the text, pointing from the top right towards the bottom left. It is rendered with a soft, semi-transparent effect, allowing the text behind it to remain visible.

## Is it legal?

EPA regulations mandate that companies properly manage their fluorescent lamps, lighting ballasts, thermostats and other lighting wastes. Companies that place these items in their normal trash could receive expensive fines and violations. Lamp Environmental Industries (LEI) has been servicing companies that generate lighting waste since 1994. LEI makes recycling easy by doing all the paperwork, transportation, and scheduling for its customers. LEI services the Southeast United States and is fully-permitted to accept all types of mercury, PCB, lead, cadmium, chromium (just to name a few) wastes.

Call us or schedule an audit of our facility and you will see why we are the recycler of choice for your lighting and hazardous waste needs.
